RET

knotrings simple pure

knots connect, hold and embellish. in metal, they symbolize eternal unity and can never be untied. as a stylistic element, knots are convincing in various dimensions: massive or filigreed, crafted from stainless steel or precious metal, simple or with brilliant-cut diamonds, as rings for the ears or the fingers.

four ever

the joy of having met one another and no longer needing to flee in all directions ... inspired by the compass rose, the metal is pressed into the fourfold mould so that slender lines are created on the outside and bulges are produced along the edges. their graining depends on the alloy and one can choose among large crystalline and smooth.

logo star ear pins

four-leaf clover, cross, starlet, flower or simply a playing in geometry ?

It is an element for jewelry, a story you can tell !

The shape of the ear pins and toggle closure derives from the sign of the workshop.
the interpretation is free for the wearers' consideration ...

loops simple

the band glides on the breeze and seems alternately wide or narrow ... fleeting yet simultaneously present, this piece of jewellery is a snapshot of motion. the metal band forms a long arc to create a piece of jewellery for the ears that accentuates the wearer's neck and is easy to wear. the clasp elegantly covers the earhole. as jewellery for the forearm, the metal band follows the natural shape of the wrist. each time this piece is put on and snapped closed, its wearer enjoys operating the simple yet secure insertion mechanism.

iron bowls

they seem very simple at first, but closer scrutiny discovers the iron vessels' slightly undulating edges. when the metal is shaped over rolling tools, the alloy seeks its own path and each vessel acquires a slightly different form. burnished to protect it against corrosion, the surface shimmers from bluish black to anthracite.

information about sustainability:

Each piece of jewelry from Oliver Schmidt's workshop is individually handmade. We source our materials onsite from responsible dealers. For example, our precious metals are supplied by refineries that belong to the Responsible Jewellery Council (RJC). The gold is recovered from secondary sources, i.e. recycled gold. The dealers who supply our gemstones comply with United Nations' resolutions on conflict-free provenance. Our stainless steel jewelry is made from skin- and body-tolerable surgical alloys. All of our pieces of jewelry are made from pure metal. Coatings are used only on our blackened jewelry: the surface is coated with a highly robust and abrasion-resistant layer that was industrially developed and is applied by industrial methods.

information about black coating, pvd:

PVD (physical vapor deposition) is a method which relies on partially ionized metal vapor to manufacture thin, metal-based, extremely hard coatings. The vapor is produced by the so-called "sputtering" process, in which highly energetically charged ions of noble gas are fired at a metal body inside a vacuum chamber.

Special characteristics:

extremely hard – resistant to abrasion – resistant to tarnishing – odorless – antiallergenic

Because of the coating's high degree of hardness, PVD is industrially utilized to make surfaces more resistant to abrasion. Fields of application include, for example, machining, medical technology, knives and timepieces.

We began using this technology ten years ago. After having determined that the coating is indeed robust and durable, we developed the combination of black plated stainless steel and brilliant-cut diamonds. The gemstones are set into the rings only after the rings have undergone the PVD coating process.

If you have any further questions, please feel free to contact us.

Thank you very much!

Oliver Schmidt
